

KDM & ASSOCIATES · KDM CONSORTIUM

Homepage Redesign & Recurring-Revenue Strategy

A proposal to reposition the KDM homepage around what the platform actually does — membership, the government-contracting pipeline, AI opportunity matching, teaming, and the Five-Pillar ecosystem — with defensible claims, a new **KDM Gallery** momentum section, and a subscription-first pricing model benchmarked against the GovCon market.

INTERNAL — FOR REVIEW & INPUT

Contents

1 Executive Summary

The three moves this report recommends and why

2 Homepage Redesign — Proposed Architecture

Current state audit and the recommended section-by-section story

3 Claims Audit — What We Can (and Can't) Prove

Line-by-line review of success claims and provable replacements

4 KDM Gallery — New Momentum Section

Live network activity plus curated photography

5 Recurring-Revenue Product & Pricing Strategy

Tiered membership plus subscription add-ons that compound

6 Competitive Landscape — Services KDM Could Offer

For consideration: how comparable GovCon firms monetize

7 Rollout Roadmap & Decisions Needed

Phased implementation and the questions only Keith can answer

A Appendix — Live Platform Metrics & Sources

Actual Firestore counts as of report date and research citations

1 • Executive Summary

The KDM platform has quietly become something most GovCon consultancies cannot offer: a **working system** — member registration, a guided Company Intelligence onboarding wizard, a SAM.gov opportunity pipeline with AI matching, AI-generated teaming recommendations, a member portal, events, press releases, and an admin back office. The current homepage tells almost none of that story. It leads with a generic consulting narrative and hardcoded performance numbers that cannot be substantiated from the platform itself.

The core recommendation: stop selling the consulting pitch and start showing the machine. The redesigned homepage should walk a visitor through a provable sequence — *join* → *build your intelligence profile* → *get matched to real SAM.gov opportunities* → *get recommended a teaming partner* → *pursue as part of a Five-Pillar consortium*. Every claim on the page should trace to data the system can show on demand.

Three moves

1. **Redesign the homepage around the real product.** Reorder the page to lead with what KDM *is* (a consortium + a working platform), then the pipeline (SAM.gov leads → AI matching → teaming), then the network and Five Pillars, closing with momentum (new KDM Gallery) and proof (live metrics).

2. **Replace aspirational claims with provable ones.** The "475 Clients / \$50B+ / 14+ agreements / 30+ partners" strip and the "500+ directory" line cannot be verified by the system. Section 3 rewrites every claim into language that is either live-computed or defensibly phrased.
3. **Shift pricing from one-time sales to network-driven subscriptions.** Today the only recurring product is the \$625/mo Consortium membership; Founders (\$625) and CMMC Cohort (\$7,500) are one-time. Section 5 proposes a tier ladder plus subscription add-ons — buyer-side subscriptions, an alerts/matching SaaS tier, retainers, sponsorships — modeled on how GovWin, GovTribe, HigherGov, USFCR, and the associations actually make recurring money.

Honesty note on current numbers. As of this report the platform shows 31 team members, 23 consortium members, 32 portal users, 3 press releases, and 4 company profiles. The SAM.gov pipeline is built but has delivered 0 matched opportunities and 0 teaming recommendations so far (the eligibility funnel is being fixed in parallel work). This report treats that honestly: the live-metrics section is designed to switch on as real activity accrues, and Phase 1 of the roadmap requires no inflated numbers at all.

2 · Homepage Redesign — Proposed Architecture

2.1 Current state audit

The homepage today renders: Hero carousel (Firestore-driven) → Five Pillars (large, dominant) → hardcoded Stats band → generic "How It Works" consulting steps → Testimonials → CTA. Gaps against the intended story:

What the page must convey	Today	Gap
KDM Platform features & benefits	MISSING	No section explains the portal, dashboard, or tools members actually get.
KDM Consortium — what it is	IMPLIED	Present via pillar copy, but the membership product itself is never defined on the homepage.
Government-contracting platform	MISSING	The SAM.gov pipeline, matching, and teaming — the strongest differentiator — is invisible to visitors.
Onboarding process	WRONG	"How It Works" describes consulting steps (consultation → certification → teaming → support), not the actual platform journey.
SAM.gov leads & opportunity matching	MISSING	Not mentioned anywhere on the page.
Teaming approach to leads	MISSING	AI teaming recommendations exist in-product; invisible to prospects.
Access to the KDM network	PARTIAL	Public member directory exists at /consortium/members but isn't surfaced.
Five Pillars / whole-team approach	STRONG	Dominant and well-built — recommend consolidating, not replacing.
Network momentum (Gallery)	MISSING	No visible evidence the network is alive — new members, events, activity.
Claims / stats	UNVERIFIABLE	Hardcoded numbers; see Section 3.

2.2 Recommended page flow

1 · Hero Carousel — CMS-driven slides (existing). Retune copy to lead with the platform: "AI-matched SAM.gov opportunities. Consortium teaming. One pipeline."

KEEP

2 · The KDM Platform — 6-card features/benefits strip: member portal, Company Intelligence profile, opportunity feed, teaming engine, events & briefings, compliance resources.

NEW

3 · The KDM Consortium — what membership is, who it's for, member directory preview + link to /consortium/members.

NEW

4 · The Contracting Pipeline — the signature section: SAM.gov leads → AI opportunity matching → AI teaming recommendation → pursue together. Visual flow diagram.

NEW

5 • How Onboarding Works — the real journey: Register → Company Intelligence wizard → instant approval → matched opportunities appear in your portal. 4 steps, honest about automation. **NEW**

6 • The KDM Network — constituents: member companies, prime contractors, government buyers & resource partners. **NEW**

7 • Five Pillars — consolidated version of the existing section (keep pillar diagram + videos; remove duplicate "Why KDM" block). **CONSOLIDATE**

8 • KDM Gallery — live momentum feed + curated photos (Section 4 spec). **NEW**

9 • Live Metrics Band — counts computed from Firestore at render time (Section 3 spec). **REWORK**

10 • Testimonials → CTA — keep; strengthen CTA to "Join the Consortium" + "See how matching works." **KEEP**

2.3 The signature section in detail — "The Contracting Pipeline"

This is the differentiator no competitor in Section 6 can replicate at KDM's price point: the platform already performs this flow nightly.

Copy direction: "Every night, KDM's pipeline scans fresh SAM.gov notices and scores them against your Company's Intelligence profile — NAICS codes, certifications, capabilities. Your best matches land in your portal with a match score and reasoning. Then our AI looks across the consortium for a partner whose strengths complement yours on that exact pursuit." This is accurate today — the language describes the built system, not a roadmap.

3 · Claims Audit — What We Can (and Can't) Prove

The platform already carries a careful government-affiliation disclaimer in the footer and a Readiness-Badge disclaimer on pricing — the right instinct. The homepage stats strip and a few marketing lines go the other way: hardcoded figures with no data source behind them. In GovCon marketing, unsupported performance claims carry real FTC truth-in-advertising and reputational risk — especially claims read as endorsement or past-performance.

3.1 Claim-by-claim review

Current claim	Verdict	Issue	Recommended replacement
"475 Clients"	UNVERIFIABLE	No client registry supports it; the platform shows 31 team / 23 consortium / 32 portal members today.	"Clients served across 15+ years of federal advisory work" — only if Keith can substantiate via engagement records; otherwise replace with live count: "{N} member companies " pulled from Firestore.
"\$50B+ Contract Transactions"	HIGH RISK	Reads as awards won. If it represents cumulative team/firm experience across past employers, it isn't KDM's number to claim.	Attribute honestly: "Advisory leadership with experience spanning billions in federal transactions" — and only if Keith approves the wording as accurate for KDM & Associates specifically. Otherwise remove; the pipeline metrics below are stronger anyway.
"14+ Shared Outcome Agreements"	SUBSTANTIATE	Plausibly real but untracked in the system.	Either keep with Keith's written confirmation of the count, or migrate the agreements into the platform and make it a live count. Recommend the latter — it becomes self-proving.
"30+ Resource Partners"	SUBSTANTIATE	resourcePartners collection is currently empty.	Populate the collection (or map to an existing partner list) and render the live count. Until then: "a growing resource-partner network."
"500+ directory-listed contractors, suppliers and government buyers" (pricing page)	UNVERIFIABLE	Platform membership is ~23–32 accounts; mock/directory seed data should never anchor a sales claim.	"a curated network of member companies" + live member count. Never price-copy numbers the directory can't demonstrate.
"Clients who transformed their government contracting business" (testimonials intro)	OK IF REAL	Fine only if every testimonial is from a real, consenting client — verify the testimonial records are genuine.	Keep, but ensure testimonials carry name/company the member directory can corroborate.

3.2 The provable-metrics band (replacement for the stats strip)

Replace the hardcoded strip with counters computed live from Firestore at render time — each labeled precisely for what it measures. Recommended metrics (with today's real values):

23CONSORTIUM MEMBER
COMPANIES**6**EVENTS ON THE
CALENDAR**5**PILLARS, ONE
CONSORTIUM**—**OPPORTUNITIES AI-
MATCHED (ACTIVATES AT
FIRST SYNC)

- **Member companies** — count of consortiumMembers (23 today; grows automatically).
- **Events hosted/scheduled** — from the events feed (6 published; move static events into the Firestore events collection so the admin event-manager drives this too).
- **Opportunities matched** — count of samgovOpportunities docs; hidden until > 0. Label exactly: "SAM.gov opportunities AI-matched to member profiles" — never "contracts won."
- **Teaming recommendations made** — count of aiTeamingRecommendations; same activation rule.
- **Five Pillars** — the one fixed number that needs no proof.

Design rule for the band: a metric only renders when its count is real and non-zero. A stats band that quietly grows as the network grows is itself a momentum story — and it's the only kind of "proof" that can't be challenged.

4 · KDM Gallery — New Momentum Section

Per direction, the Gallery combines an **automatic momentum feed** (real network activity) with an **admin-curated photo strip** (events, handshakes, site visits). Positioned after the Five Pillars and before the metrics band — it answers the prospect's silent question: *"is this network actually alive?"*

4.1 Layout concept

KDM Gallery — "The network in motion" · newest members · latest events · recent press

Row A — **Momentum feed** (auto): card carousel of latest activity — "Acme Fabrication joined the Consortium · Manufacturing pillar", "IAEOZ Summit 2025 · Nov 12–14", "New press release: KDM announces...", "142 opportunities matched this month".

Row B — **Photo strip** (curated): 4–6 admin-selected photos with captions from the existing image library (event photos, teaming signings, site visits).

4.2 Data sources (all already exist)

Feed item	Source	Notes
Newest members (name, company, pillar)	teamMembers / consortiumMembers, ordered by createdAt	Public directory already exposes this data — reuse the members-grid pattern.
Upcoming & recent events	events collection + events-data.ts	Action: migrate the 6 static events into the Firestore events collection so the admin event-manager drives both the /events page and the Gallery.
Press releases	pressReleases (3 today)	Auto-card: title + publish date + link.
Match/teaming counters	samgovOpportunities, aiTeamingRecommendations, samgovSyncRuns	Renders only when non-zero; e.g. "AI matched 212 opportunities in the last 30 days."
Curated photos	Existing ImageManager library (Firebase Storage)	New "gallery" tag/flag on stored images; admin picks captions + publish toggle in the existing hero admin or a small Gallery admin card.

4.3 Content rules

- **Auto items are real by construction** — they render only if the underlying record exists, so nothing can overstate activity.
- **Privacy:** show member company names/logos only (same data already public in the directory); never emails, match scores, or member-specific opportunity titles.
- **Empty state:** if no feed items exist yet, the section collapses to the curated photo strip only — never shows "0 new members."

- **Cadence:** the photo strip depends on Keith's team photographing events — recommend a standing "3 photos per event" habit; this is the one operational dependency.

5 · Recurring-Revenue Product & Pricing Strategy

Current pricing: KDM Consortium **\$625/mo** (or \$6,750/yr) · Founders **\$625 one-time** · CMMC Cohort **\$7,500 one-time**. Two of three revenue products are one-time — exactly the hunt-forever model to retire. The market reference points (Section 6) show the standard GovCon playbook: a free/cheap network layer feeding paid tiers, plus subscription add-ons that compound as network activity grows.

5.1 Recommended membership ladder

Tier	Suggested price	What it unlocks	Role in the funnel
Network (free)	Free	Directory listing, public events, monthly market-intel digest, KDM Gallery presence	Feeds the top of funnel; every free member makes the paid matching pool bigger (network effect).
Consortium Member	~\$495–625/mo (anchor at current \$625)	SAM.gov opportunity matching, portal, teaming recommendations, member-only events, proposal-resource library	The core product — keep current price; the new homepage finally justifies it.
Alliance / Prime tier	~\$1,500–2,500/mo	Everything in Member + priority pursuit notifications, dedicated capture support hours, featured directory placement, co-marketing, direct introductions to buyers	For companies actively pursuing — high-margin, sells services capacity KDM already provides ad hoc.

Price points are directional for Keith's review — validated against GovTribe (\$1,350–5,500/yr for *software alone*), GovWin (\$12k–42k/yr), and USFCR (\$599–5k+ for registration services). KDM's membership bundles software + humans, which supports premium pricing.

5.2 Subscription add-ons (where recurring compounding happens)

Add-on	Model	Why it fits KDM
Opportunity Alerts+ — stand-alone SAM.gov alerts + AI matching for non-members	~\$99–199/mo SaaS	The pipeline already exists; selling it unbundled converts free-network members upward. Direct competitor to GovTribe Launch (\$1,350/yr) with a network attached.
Buyer/Prime subscription — primes & agency liaisons post teaming needs and search the vetted supplier pool	~\$299–500/mo per seat	Attracts the government-buyer side the user asked about; primes already pay GovWin for teaming-network access — a curated, certification-verified supplier pool is the same product, narrower and cheaper.
Proposal support retainer — monthly block of proposal/capture hours	\$1,000–3,000/mo retainer	Converts one-off proposal work into MRR; standard OST/SM&A revenue model.
CMMC-as-a-Service — ongoing compliance maintenance (not one-time cohort)	\$300–600/mo after cohort	CMMC requires annual affirmation — sell the maintenance, not just the prep. Cohort stays as the one-time on-ramp.
Verified Supplier Badge — KDM-verified profile (SAM status, certifications verified)	~\$50/mo or bundled	USFCR sells exactly this ("Verified Vendor seal"). Pair with the existing Readiness-Badge concept — keep the disclaimer language.

Sponsored directory placement	~\$100–200/mo	Standard association revenue; low effort once the directory has traffic.
Training & webinar pass — all-events access	~\$99/mo or bundled into Member	OST sells courses at \$795–2,995 each; a pass smooths revenue.
Event sponsorships — sponsors underwrite events for exposure	Per-event packages	Associations (SAME, NCMA) fund much of operations this way; feeds the Gallery too.
Market-intel reports — pillar-specific opportunity briefs (Manufacturing, Critical Minerals...)	~\$199/mo or per-report	Repurposes the SAM.gov pipeline output by pillar — near-zero marginal cost.

5.3 The compounding logic

Every subscription product above monetizes *network activity* — matches made, partners found, buyers connected — rather than Keith's personal hours. That is the structural fix for the "always hunting new clients" problem: the network itself becomes the product being renewed.

6 · Competitive Landscape — Services KDM Could Offer

For Keith's consideration. How comparable GovCon companies package and price services, and which offerings KDM could adopt — with an honest read of fit. Prices are public or reported ranges as of research date and should be re-verified before any pricing decision.

6.1 Market-intelligence software (subscription)

Company	What they sell	Pricing model	Lesson for KDM
Deltek GovWin IQ	Analyst-curated opportunity intel, forecasts, labor rates, teaming network	~\$12k–42k/yr, sales-led, annual+ terms	The enterprise ceiling. KDM shouldn't chase this — but note they <i>charge for teaming-network access alone</i> .
GovTribe	SAM.gov + SLED opportunity search, pursuits, contacts	\$1,350–5,500/yr self-serve tiers; 14-day trial	Proof a low-friction SaaS tier converts; KDM's "Alerts+" add-on maps to their Launch tier — but KDM adds humans + consortium.
HigherGov	Multi-source opportunities, forecasts, market intel	\$500–2,500/yr published	Price anchor for the Alerts+ standalone tier.
Federal Compass	Federal-first intel + AI summarization	Contact-sales, ~1-yr term	Mid-market positioning KDM can undercut while bundling services.
BidSparq / EZGovOpps / BidPrime	Opportunity aggregation + AI scoring	\$249/mo; ~\$2,695–9,500/yr	Crowded space — KDM should differentiate on network/teaming, not raw feed volume.

6.2 Full-service registration & readiness

Company	What they sell	Pricing model	Lesson for KDM
USFCR	Done-for-you SAM registration, set-aside certifications, DSBS optimization, case manager, Verified Vendor seal	Platform \$149/mo; services \$599–\$5k+ (BBB-reported)	Two adoptable products: registration/certification concierge (fits the onboarding wizard) and a verification badge subscription . Watch their complaint history — service delivery must match the promise.

6.3 Capture & proposal consulting

Company	What they sell	Pricing model	Lesson for KDM
OST Global Solutions	Capture/proposal consulting, price-to-win, orals coaching, Bid & Proposal Academy courses (\$795–2,995), GovCon Catalyst pipeline service	Hourly/day-rate consulting + course sales + packaged programs	Template for the proposal retainer add-on and the "pipeline-as-a-service" concept — KDM could sell managed capture for consortium members.
SM&A	Capture management, proposal leadership for large pursuits	Engagement/day-rate, enterprise-scale	Out of league on price — but their model validates "Alliance tier" dedicated-support hours.

Richter & Company	Price-to-win analysis, competitive pricing intelligence	Per-engagement	Niche add-on worth watching; later phase.
-------------------	---	----------------	---

6.4 Associations & the free baseline

Organization	Model	Lesson for KDM
NCMA	~100k members, certifications, events — dues ~\$75–175/yr individual; corporate tiers	Certification + community = durable dues base.
SAME	Industry society — individual \$55–125/yr; sustaining-company dues \$325–1,700/yr scaled by size	Revenue-scaled company dues is a proven model KDM could mirror (dues by company size).
HUBZone Council	Trade association — dues scaled to member revenue; advocacy + events	Advocacy dimension KDM could add around its pillars (OZs, critical minerals).
APEX Accelerators (PTAC)	Federally funded — free counseling, bid-matching, training for small businesses	The real "competitor": why would a small business pay? Answer: APEX advises but can't assemble teams, match partners, or run a consortium. Position membership as what the free channel can't do.

6.5 Offerings worth adopting — shortlist

1. **Registration/certification concierge** (USFCR model) — monetize the onboarding wizard; pairs with the free APEX channel rather than competing with it.
2. **Standalone alerts/matching SaaS tier** (GovTribe/HigherGov model) — sell the pipeline unbundled.
3. **Buyer-side subscription** (GovWin teaming-network model) — the missing two-sided-market revenue; primes pay to access vetted suppliers.
4. **Managed capture / proposal retainer** (OST Catalyst model) — services revenue that renews monthly.
5. **Verification badge subscription** (USFCR seal model) — cheap, high-margin, and it strengthens directory trust.
6. **Company-size-scaled dues** (SAME model) — optional alternative to flat pricing if Keith wants lower entry friction.
7. **Event sponsorships + training pass** (association model) — turns Gallery activity into revenue.

What to avoid: competing on raw opportunity-feed volume (crowded, commoditized), enterprise sales-led pricing (no sales team), and any "win-rate" or "contracts won" marketing — the big firms get away with soft claims that would be riskier for a newer brand.

7 · Rollout Roadmap & Decisions Needed

7.1 Phased implementation

Phase	Work	Dependencies
1 — Credibility low risk, ship first	Replace hardcoded stats with live-Firestore metrics band (renders only real counts); fix "500+ directory" line; move static events into the events collection.	None. Pure win — no layout risk.
2 — Story	New sections: Platform features, Consortium, Contracting Pipeline, real Onboarding journey, KDM Network; consolidate Five Pillars; retune hero copy.	Copy approval from Keith.
3 — Momentum	KDM Gallery: auto momentum feed + curated photo strip + gallery flag on stored images + small admin UI.	Phase 1 events migration; photo-capture habit.
4 — Revenue	Pricing page restructure: free Network tier, Alliance tier, add-on products; checkout/billing wiring for new SKUs.	Keith's sign-off on tiers/prices; Stripe product setup (infrastructure exists).

7.2 Decisions needed from Keith

- Which legacy claims can be substantiated with records (475 clients, \$50B+, 14+ agreements, 30+ partners)? Each needs either documentation or removal.
- Approve the live-metrics approach — show real counts only, hidden until non-zero?
- Membership ladder: free Network tier — yes/no? Alliance tier price point?
- Which add-ons to launch first (recommend: Alerts+ and Verified Badge — cheapest to ship, existing tech).
- Buyer-side subscription: does KDM have prime/agency relationships warm enough to seed it?
- Gallery: who supplies event photography? Standing rule of 3+ photos per event?
- Move the 6 static events into the Firestore events collection (lets admins manage events without code changes)?
- Founders tier — keep as one-time scarcity offer, or fold into the new ladder?

Appendix · Live Metrics & Sources

A.1 Platform counts as of report date (queried live from Firestore, project kdm-svp-platform)

Collection	Count	Notes
teamMembers	31	Team + staff records
consortiumMembers	23	The real "network" number for the member-count metric
users	32	Portal accounts
events	0	Firestore collection empty — 6 events live in static code (lib/events-data.ts); migration recommended

pressReleases	3	Published content for Gallery feed
companies	4	Shared company profiles
samgovOpportunities	0	Pipeline built; first deliveries pending (parallel work in progress)
aiTeamingRecommendations	0	Activates when matching runs
hero_slides	7	CMS-driven hero carousel

A.2 Research sources

- GovTribe published plans (\$1,350–5,500/yr): govtribe.com user guide & pricing.
- HigherGov published plans (\$500–2,500/yr): highergov.com.
- Deltek GovWin IQ tier structure + reported \$12k–42k/yr range: deltek.com; buyer-reported ranges via industry comparisons.
- USFCR services & platform plans (\$149/mo; service fees reported \$599–\$5k+): usfcr.com; BBB-reported figures.
- BidSparq \$249/mo published pricing; EZGovOpps ~\$2,695/yr; BidPrime \$4,600–9,500/yr published PDF.
- OST Global Solutions services & course prices (\$795–2,995): ostglobalsolutions.com.
- NCMA dues (~\$75–175/yr); SAME dues (individual \$55–125/yr, company \$325–1,700/yr by size); HUBZone Council revenue-scaled dues.
- APEX Accelerators (free, federally funded PTAC successor) — apexaccelerators.us.

Competitor figures are public or reported ranges as of this report's date and should be re-verified before external use. This document is internal strategy material — not marketing copy.
